

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

Claim 1 (currently amended): An electronic device, comprising:

a display, wherein an image is displayable on said display showing an image;

and

a navigation sensor, whereby a movement of said electronic device relative to a surface in close proximity to said navigation sensor is sensed by said navigation sensor and said movement includes moving said display and said movement produces a change in said image that is showing on said display.

Claim 2 (original): The electronic device of claim 1 wherein said change comprises at least moving a cursor.

Claim 3 (original): The electronic device of claim 1 wherein said change comprises at least panning at least part of said image that is showing on said display.

Claim 4 (original): The electronic device of claim 1 wherein said change comprises at least scrolling at least part of said image that is showing on said display.

Claim 5 (original): The electronic device of claim 1 wherein said change comprises at least navigating at least part of said image that is showing on said display.

Claim 6 (original): The electronic device of claim 1 further comprising:

a first button, whereby said movement of said electronic device and said first button may be operated in cooperation to mimic at least one function of a computer mouse being used with a graphical user interface.

Docket No. 10991892-1

2

Claim 7 (original): The electronic device of claim 6 further comprising:

a second button, whereby said movement of said electronic device, said first button, and said second button may be operated in cooperation to mimic more than one function of a computer mouse being used with a graphical user interface.

Claim 8 (original): An electronic device, comprising:

a display;

a navigation sensor coupled to said display whereby said navigation sensor detects a movement of said electronic device relative to a surface in close proximity to said navigation sensor and said movement includes movement of said display and an image displayed on said display is altered in response to said movement.

Claim 9 (original): The electronic device of claim 8 wherein said image displayed on said display is altered in response to said movement by moving an image of a cursor.

Claim 10 (original): The electronic device of claim 8 wherein said image displayed on said display is altered in response to said movement by panning a second image displayed on at least part of said display.

Claim 11 (original): The electronic device of claim 8 wherein said image displayed on said display is altered in response to said movement by scrolling a second image displayed on at least part of said display.

Claim 12 (original): The electronic device of claim 8 wherein said image displayed on said display is altered in response to said movement by showing a different part of a second image part of which is displayed on at least part of said display.

Claim 13 (original): The electronic device of claim 8 further comprising:

a first button, whereby said movement of said electronic device and said first button may be operated in cooperation to mimic at least one function of a computer mouse being used with a graphical user interface.

Claim 14 (original): The electronic device of claim 13 wherein a graphical user interface is being displayed on said display.

Claim 15 (original): The electronic device of claim 13 further comprising:  
a second button, whereby said movement of said electronic device, said first button, and said second button may be operated in cooperation to mimic more than one function of a computer mouse being used with a graphical user interface.

Claim 16 (original): The electronic device of claim 15 wherein a graphical user interface is being displayed on said display.

Claim 17 (currently amended): A method of manipulating an image displayed by a device on a display, said method comprising:

moving the entire device including said display relative to a surface upon which said device is placed;

detecting movement of said entire device relative to said surface; and  
manipulating said image based on said movement.

Claim 18 (original): The method of claim 17, further comprising:  
moving a cursor displayed on said display.

Claim 19 (original): The method of claim 17, further comprising:  
scrolling at least part of said image displayed on said display.

Claim 20 (original): The method of claim 17, further comprising:  
panning at least part of said image displayed on said display.

Claim 21 (original): The method of claim 17, further comprising:  
showing a different part of a second image at least part of which is displayed on said display.

Claim 22 (currently amended): A method of manipulating an image displayed on a display, said method comprising:

detecting a movement of a device that includes said display wherein said movement is detected relative to a surface in contact with said device; and,  
altering said image in response to said movement.

Claim 23 (original): The method of claim 22, further comprising:  
moving a cursor displayed on said display.

Claim 24 (original): The method of claim 22, further comprising:  
scrolling at least part of said image displayed on said display.

Claim 25 (original): The method of claim 22, further comprising:  
panning at least part of said image displayed on said display.

Claim 26 (original): The method of claim 22, further comprising:  
showing a different part of a second image at least part of which is displayed on said display.

Claim 27 (original): An electronic scanning device, comprising  
an image sensor for scanning an image;  
a display that displays a first part of a scanned version of said image,  
a navigation sensor that detects relative movement between said scanning device and a surface in close proximity to said navigation sensor whereby said relative movement changes said display to displaying a second part of said scanned version of said image.

Claim 28 (original): The electronic scanning device of claim 27 wherein said relative movement may also move a cursor displayed on said display.

Claim 29 (original): The electronic scanning device of claim 27 wherein said second part of said scanned version of said image is a scrolled in relation to said first part of said scanned version of said image.

Claim 30 (original): The electronic scanning device of claim 27 wherein said second part of said scanned version of said image is a panned in relation to said first part of said scanned version of said image.

Claim 31 (original): The electronic scanning device of claim 27 wherein said second part of said scanned version of said image is displaced in two directions in relation to said first part of said scanned version of said image.

Claim 32 (currently amended): A method of previewing a scanned image, said method comprising:

displaying a first part of a scanned image;

displaying a second part of said scanned image in response to relative movement between a scanning device and a surface in close proximity to said scanning device.

Claim 33 (original): The method of claim 32 wherein said second part of said scanned image is scrolled in relation to said first part of said scanned image.

Claim 34 (original): The method of claim 32 wherein said second part of said scanned image is panned in relation to said first part of said scanned image.

Claim 35 (original): The method of claim 32 wherein said second part of said scanned image is displaced in two directions in relation to said first part of said scanned image.

Claim 36-42 (canceled)

Claim 43 (currently amended): An electronic device, comprising:

a display located on a first side of said electronic device;

a navigation sensor ~~coupled to said display whereby said navigation sensor is not on the same~~ located on a second side of said electronic device, said second side being opposite said first side, wherein and said navigation sensor detects a movement of a part of a user relative to said navigation sensor placed located in close proximity to said navigation sensor, ~~and wherein said movement does not include movement of said device and wherein~~ an image displayed on said display is altered in response to said movement of said part of said user relative to said navigation device.

Claim 44 (original): The electronic device of claim 43 wherein said image displayed on said display is altered in response to said movement by moving an image of a cursor.

Claim 45 (original): The electronic device of claim 43 wherein said image displayed on said display is altered in response to said movement by panning a second image displayed on at least part of said display.

Claim 46 (original): The electronic device of claim 43 wherein said image displayed on said display is altered in response to said movement by scrolling a second image displayed on at least part of said display.

Claim 47 (original): The electronic device of claim 43 wherein said image displayed on said display is altered in response to said movement by showing a different part of a second image part of which is displayed on at least part of said display.

Claim 48 (original): The electronic device of claim 43 further comprising:

a first button, whereby said movement of said part of said user and said first button may be operated in cooperation to mimic at least one function of a computer mouse being used with a graphical user interface.

Claim 49 (original): The electronic device of claim 48 wherein a graphical user interface is being displayed on said display.

Claim 50 (original): The electronic device of claim 48 further comprising:  
a second button, whereby said movement of said part of said user, said first button, and said second button may be operated in cooperation to mimic more than one function of a computer mouse being used with a graphical user interface.

Claim 51 (original): The electronic device of claim 50 wherein a graphical user interface is being displayed on said display.

Claims 52-56 (canceled)
